

Abstract of the disclosure

Method and system of communications

In a method and system of communications in a network using a protocol of transmission by pulses between a master station and one or more user stations, the method comprising the steps of synchronizing the pulse response of the master station received by the user stations, acquiring the pulse responses from the user stations received by the master station, sending pulses close to each other from the master station to the different user stations, and from the different users to the master station, and equalizing the pulses at reception for each user station and for the master station.
